## Vapor Pressure of Water

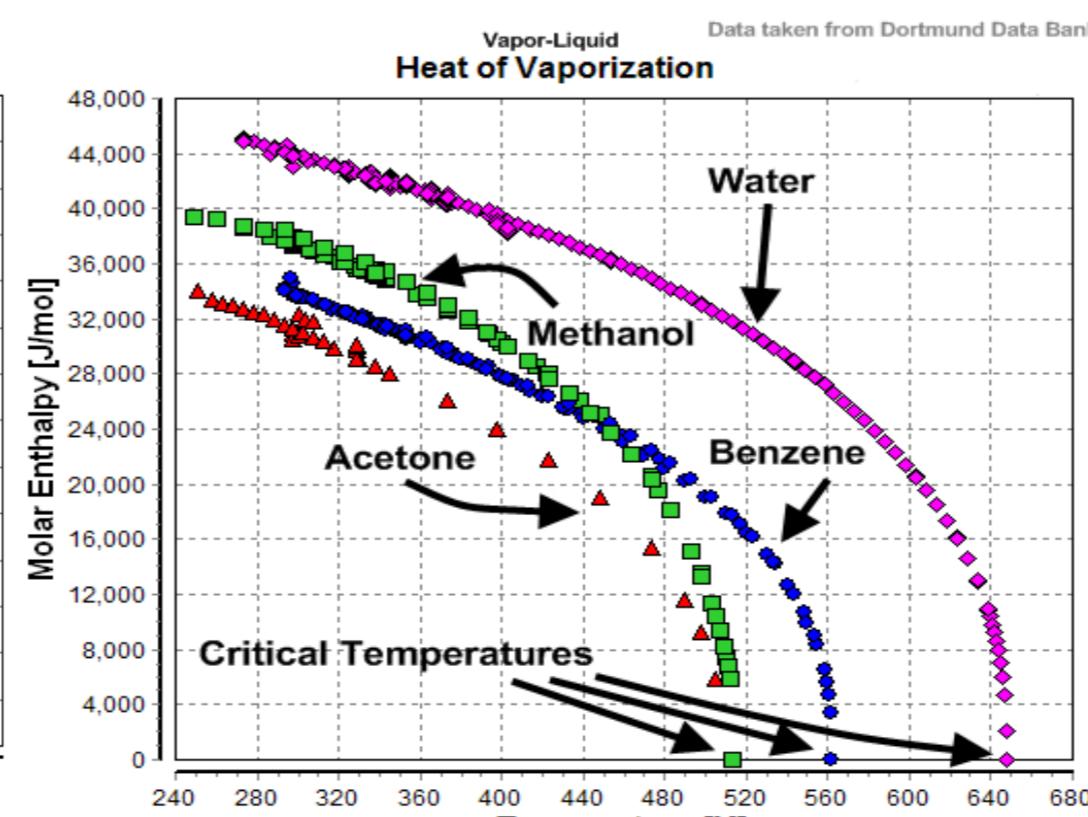

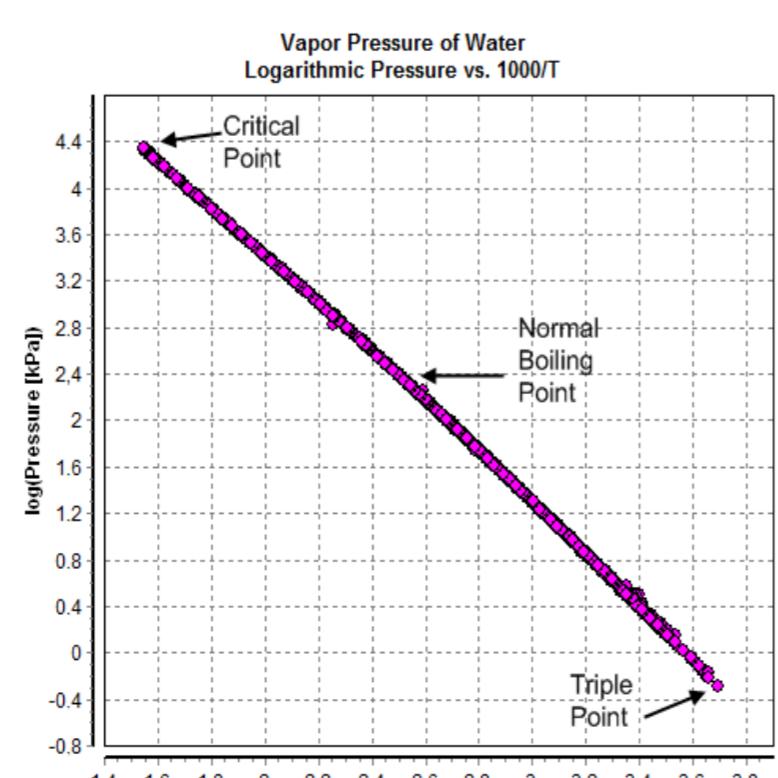

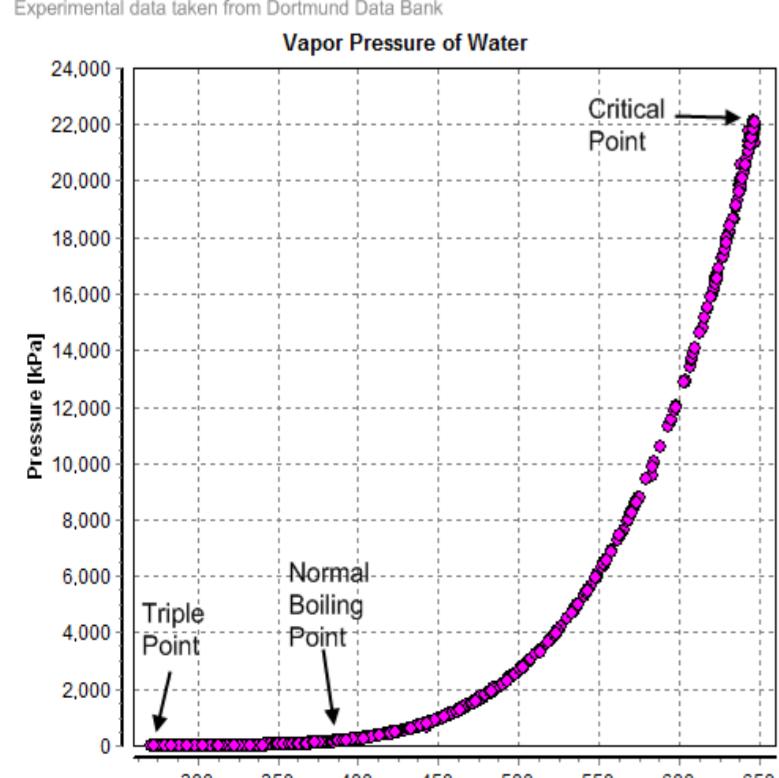

$$P = \exp\left(20.386 - \frac{5132}{T}\right) \text{ mmHg}$$

$$\log_{10} P = A - \frac{B}{C + T}$$

|       | A       | B / °C  | C / °C  | T <sub>min</sub> °C | T <sub>max</sub> °C |
|-------|---------|---------|---------|---------------------|---------------------|
| Water | 8.07131 | 1730.63 | 233.426 | 1                   | 99                  |
| Water | 8.14019 | 1810.94 | 244.485 | 100                 | 374                 |

Experimental data taken from Dortmund Data Bank

| T(C) | T(F) | p (kPa)  | p (torr) | p (atm) |
